The Tripartite Model of Blue Dynamics: Extending Janiszewski for the Anthropocene

Authors: [Your Name/Team] **Date:** February 12, 2026 **Context:** European Sociological Association (ESA) / One Ocean Manifesto Alignment

1. Introduction: From Semi-Determinism to Blue Entanglement

This framework revisits the foundational **Theory of Marinisation** (*teoria marynizacji*) by Ludwik Janiszewski. Janiszewski's original semi-deterministic logic posited a dialectic between the **Marine Factor** (*czynnik morski* - the environment determining potential) and the **Human Factor** (*czynnik ludzki* - society realising that potential).

In the context of the **Anthropocene** and the **Sustainable Blue Economy**, we argue that this dyad is no longer sufficient. The scale of human impact has blurred the line between the "natural" ocean and "social" action. To support frameworks like the *One Ocean Manifesto*, the *High Seas Treaty*, and the *EU Ocean Pact*, we extend Janiszewski's model into a **Tripartite Model of Blue Dynamics**.

This model introduces a third dimension—the **Oceanic Domain**—and maps the cyclic processes of **De-** (erosion/crisis) and **Re-** (regeneration/revival) across all three spheres.

2. The Tripartite Model of Blue Dynamics

Domain I: The MARINE FACTOR (*Czynnik Morski*)

The Domain of Biophysical & Ecological Involuntary Agency

This domain represents the ocean's intrinsic power. It is the **Process of Marinisation** in its purest form: the capacity of the hydrosphere (tides, climate, salinity, biodiversity) to shape human life, impose limits, and dictate survival conditions regardless of human will.

- **The Crisis: De-Marinisation (The Silencing of Agency)**
  - *Definition:* The suppression of the ocean's regenerative capacity. It is the reduction of the living sea to a passive resource pit or waste sink ("Aqua Nullius").
  - *Manifestation:* Biodiversity collapse, acidification, hypoxia, and plastic saturation. It is the interruption of the ocean's metabolic circulation.
  - *Sociological Impact:* The loss of the "Marine Factor" as a regulatory force; the ocean ceases to sustain the littoral societies it once shaped.
- **The Fix: Re-Marinisation (The Regenerative Turn)**
  - *Definition:* Restoring the agency of the Marine Factor. Acknowledging that the ocean *must* limit human activity for survival.
  - *Mechanism:* Implementation of Nature-based Solutions (NbS), strict Marine Protected Areas (MPAs) under the High Seas Treaty (BBNJ), and the legal recognition of the *Rights of Nature*.
  - *Goal:* Moving from extraction to **Planetary Stewardship**.
- **The Flow: Trans-corporate Marinisation (The Metabolic Cycle)**
  - *Definition:* The "sea marinises the land." This is the involuntary, circular movement of the hydrosphere through the lithosphere and anthrosphere.
  - *Mechanism:* The circularity of the water cycle, nutrient exchange, humidity, rainfall, and the Gulf Stream's thermal regulation. It is the recognition that the "hinterland" is hydraulically connected to the deep sea.

Domain II: The MARITIME FACTOR (*Czynnik Morski-Ludzki*)

The Domain of Techno-Economic, Institutional & Infrastructural Action

Based on Janiszewski's "Human Factor" but reinterpreted as the **Maritime Factor**. This is the domain of humans **terraforming the sea**—the deliberate organisation of space, labour, and technology.

- **The Process: Maritimisation**

    - The institutional, economic, and technological colonisation of the sea (ports, fleets, energy grids, legal regimes like MSP).
- **The Loss: De-Maritimisation (The Socio-Cultural Erosion)**
    - *Definition:* The decline of traditional "People of the Sea." The rusting of old port infrastructure, the gentrification of working waterfronts into luxury housing/tourism (erasing the memory of labour), and the loss of intergenerational maritime skills (the "knowledge gap").
    - *Impact on Blue Value:* **Alienation.** Coastal communities suffer "sea-blindness." If locals feel they have no economic or cultural stake in the ocean, they resist Blue Economy projects (e.g., protesting offshore wind). They become "strangers by the sea."
- **The Revival: Re-Maritimisation (The Socio-Economic Renewal)**
    - *Definition:* The **Sustainable Blue Economy**. Creating *new* maritime occupations that provide dignity and livelihood (e.g., offshore wind technicians, restorative aquaculture farmers, blue biotech scientists).
    - *Mechanism:* "Locking in" new institutional pathways (Participatory Marine Spatial Planning) that prioritise local labour, community benefits, and the "living memory" of the coast.
    - *Goal:* Moving from the **Alienation of Human from Nature** (Anthropocene) towards **Trans-corporate Stewardship**.
    - *Concept of Trans-corporate in Maritime Domain:* Giving way to those who have no voice; self-restraint; defending the interests of nature in the name of our shared habitat as a **supra-human good**.

Domain III: The OCEANIC FACTOR (*Czynnik Wszechoceanu*)

The Domain of Ontological, Hydrosocial & Consciousness Entanglement

This is the **Novelty Extension**. While Janiszewski focused on the *Sea* (Morze) and the *Human* (Ludzie), this domain focuses on the **Ocean** (Wszechocean) as a totalising, planetary system.

- **The Process: Oceanisation**
    - The realisation that human existence is fundamentally "wet," fluid, and connected to the planetary hydrosphere.
- **The Severing: De-Oceanisation (The Ontological Rift)**
    - *Definition:* The cultural and spiritual disconnection from water. Treating the ocean merely as a "sector" on an Excel sheet (Blue Growth) rather than a life-support system. The illusion that terrestrial life is separate from the ocean ("Dry Sociology").
    - *Impact:* A "soul-less" economy that generates profit but destroys well-being.
- **The Reconnection: Re-Oceanisation (The Consciousness Shift)**
    - *Definition:* The rise of **Ocean Literacy** and **Blue Citizenship**. Acknowledging **Transcorporeality** (Stacy Alaimo's concept)—that we are bodies of water interacting with other bodies of water.
    - *Mechanism:* Integrating "Blue Humanities" into policy; the *One Ocean Manifesto*'s call for emotional and cultural connection; recognising the ocean as a "Super-Actant."

3. The Blue Value Logic-Matrix: Towards Cohabitation

The **Sustainable Blue Value** is not defined by GDP (Blue Growth). It is the **equilibrium point** where the three "Re-" processes intersect.

Dimension	The Crisis (De-)	The Fix (Re-)	The Logic of Value
MARINE	**De-Marinisation:** Biodiversity collapse; Pollution; "Silent Ocean."	**Re-Marinisation:** Regeneration; NbS; Circularity; Rights of Nature.	**ECOLOGICAL INTEGRITY** (The Ocean breathes)
MARITIME	**De-Maritimisation:** Rust belts; Alienation; Loss of identity/skills.	**Re-Maritimisation:** Sustainable Blue Economy; Good Jobs; Just Transition.	**SOCIAL EQUITY** (The Community thrives)
OCEANIC	**De-Oceanisation:** Sea-blindness; "Dry" ontology; Exploitation.	**Re-Oceanisation:** Ocean Literacy; Transcorporeality; Blue Citizenship.	**ONTOLOGICAL CONNECTION** (The Human understands)

The Ultimate Goal: Just-Inclusive-Solidary-Collaborative-Cohabitation

Extending Janiszewski's semi-determinism, we conclude that the "Blue Economy" fails if it is only *Maritime* (economic) or only *Marine* (conservationist). It must be **Oceanic** (integrative).

The final output of this matrix is a state of **Trans-corporeal Entanglement**, defined as:

> **"Just-Inclusive-Solidary-Collaborative-Cohabitation of all blue transcorporeal entanglement of water bodies."**

- **Just:** Correcting the power asymmetries of De-maritimisation (giving power back to coastal communities).
- **Inclusive:** Bringing the "Human Factor" back into decision-making via Re-maritimisation.
- **Solidary:** Acknowledging that the health of the human body is tied to the health of the water body (Re-marinisation).
- **Collaborative:** Governance that moves beyond the "Sector" to the "System" (One Ocean).
- **Cohabitation:** The final realization that we do not *use* the ocean; we *live with* and *as* the ocean.

4. Summary for the Manuscript

"The *Theory of Marinisation* must therefore be upgraded. It is no longer just about how the sea impacts society (determinism) or how society impacts the sea (utilitarianism). It is about the **Oceanic Cycle**: We **Re-maritimise** our economy (techno-social) to provide the agency to **Re-marinise** our ecosystems (biophysical), which in turn deepens our **Re-oceanisation** (ontological)—our conscious return to the water. This is the only pathway to a Blue Value that defends the interests of nature in the name of our shared habitat as a supra-human good."
